Rain Water Harvesting – Status Report

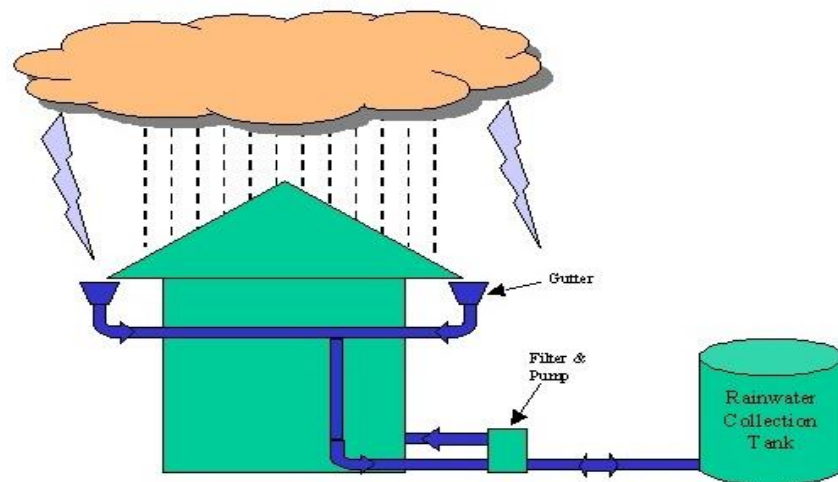

Rain water, if handled properly can be of high value as it contains several nutrients and is a vital source of fertilizer. Today water is depleting in a large amount, saving a drop of water plays an important role. In this context it was decided to have rain water harvesting pits to conserve rain water.

The proposal for rain water harvesting was approved on 4th Feb. 2017

1. Behind the Administrative block, near UPS room.

Rain water harvesting unit near UPS room is constructed and is in use.
